INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY (SEPARATE SHEET)

International application No.

PCT/NO 03/00340

V.

The method according to present claim 1, in particular (a) reacting in a combustion chamber with a carbon-rich gas the oxygen-rich gas evolved at the anodes of an Al molten electrowinning cell (b), is neither disclosed in nor fairly suggested by the state of the art on record.

Steps (a) and (b) are separately disclosed in individual prior art citations (WO'208 and WO'709). However, there is no hint in any of these documents pointing to the combination of said steps to arrive at the integrated method of the invention.

The possibility of, inter alia, utilising <u>in situ</u> the oxygen-rich gas from the electrolysis cell thereby avoiding the costs of compressing/liquefying (and shipping) the produced oxygen justifies the acknowledgment of an inventive step to the present method.
